FHMG API SITE(https://fhmg.com/)
Role : Developer
Technology: Drupal 7
Description : FHMG Portal is a hub for storing all the data of physicians of Florida Hospital Medical Group. The website was built from scratch such that it
pulls in data from various API calls and stores them in different types of nodes like Physician, Location, Departments, Treatments, Specialty and Tests. Main challenge was to make a relationship between the data received from the API calls and then storing them into different types of nodes but still maintaining a relationship to pull all the data together. Cron API and Queue API was utilized to update the content in the hub from various API calls. The cron process has been fine tuned for properly executing data pull from various API calls.
Key activities:
• Styling of some pages
• Adding the contents to the site
